During 2011 a framework for Climate Services was initiated within NORDMET co-operation between the Nordic National Meteorological Services. The aim of NORDMET is to achieve better cost efficiency by sharing resources in such areas as observation, information management, production and education. The main objective for the new group Nordic Framework for Climate Services, NFCS, is to boost the availability of climate information in the Nordic countries, by developing and sharing best practices in data handling, products and communication.

Develop strategies to advance visibility and usability of Nordic climate services for user communities.

Organize meetings and workshops to develop methods and concepts of climate services for various user groups.

Develop ways of communicating the scientific content of climate information in an understandable format.

Provide data and expertise, collaborate on developing tailored climate products, and promote joint methodological development.

Contribute to international collaboration on climate services.
